CCCU Ramps Up Tech Focus with New Website and Technology Officer

Hopefully you have had a chance to check out our new mobile-friendly website and the app that allows you to access your accounts on the go. The new website and app allows you to do even more business remotely, including deposit a check on your smart phone without leaving work, check your account balance between Instagram posts, and transfer money while hiking in Red Rock.

CCCU has taken its commitment to technology a step further by hiring its first Chief Technology Officer, Fred Howard.

Howard will help make sure the credit union continues to use technology to provide the best user experience for our members. We are excited to have someone so interested and committed to all things tech on our team!

“I love technology and I keep up with new gadgets, programs and apps in both my personal and professional life,” said Howard. “With my new position at CCCU, I will be able to combine my passion for technology with my dedication to team collaboration.”

The credit union CEO Matt Kershaw had been looking for someone with a proven track record of delivering IT projects and systems on time and on budget. “We are highly sensitive to the administrative costs of running the credit union – the more efficient we are, the more money we can give back to our members in the annual dividend each year,” said Kershaw. “Fred will help the credit union use technology to provide the best user experience for our members.”

A big part of Howard’s job will be to look ahead to the technology that is being developed and see how it can fill a need today. We predict great advances and improved member services in the near future. Welcome to CCCU, Fred!
